

MOBILE INTEGRATED HEALTHCARE

Evolution Health's fully integrated medical practice specializes in providing the highest quality care in the home and alternative settings, whether it's for one patient or a population of thousands. With a focus on the high-risk, medically complex, chronically ill, frail elderly, mobility impaired and other vulnerable patients, Evolution Health reduces the cost of care to risk-bearing entities by understanding that population health requires both planned and unplanned care.

Evolution Health's comprehensive Mobile Integrated Healthcare team enables effective, efficient and personalized assessment of patients. Evolution Health's state-of-the-art Medical Command Centers provide immediate access to licensed medical professionals capable of evaluating the patient's current condition, then matching and deploying appropriate resources to meet the patient's needs.

EVOLUTION HEALTH SERVICES

CASE STUDY:

Deploying Appropriate Resources Prevents Readmission

SITUATION

Patient

- 80-year-old female with a history of congestive heart failure (CHF), chronic obstructive pulmonary disease (COPD), chronic renal insufficiency and abdominal aortic aneurysm using an oxygen tank for breathing support.

Condition

- Patient unable to get a new home oxygen tank upon discharge from the hospital Friday evening.

Call

- Prior to the initially scheduled Mobile Integrated Healthcare (MIH) provider visit, patient calls into the Medical Command Center (MCC) complaining of respiratory distress with SpO2 of 80 percent.

CARE PLAN

Initial Triage

- The MCC immediately dispatches a specially credentialed local MIH paramedic.

Diagnosis

- Respiratory distress due to a dilapidated oxygen concentrator.

Actionable Treatment

- The Care Team:
 - **Consults** with the MCC on-call Physician Assistant (PA) who assesses the patient and determines a new source of oxygen is required
 - **Connects** with the MIH team to provide portable oxygen until a new concentrator can be delivered
 - **Arranges** the delivery of an oxygen concentrator to the patient's home

OUTCOMES

Results

- The patient successfully avoided hospital readmission for more than five months.

Cost & Time Savings

- The MIH Integrated Care Team's coordination efforts prevented the patient from returning to the hospital within a day of discharge saving unnecessary ED costs.
