

MOBILE INTEGRATED HEALTHCARE

Evolution Health's fully integrated medical practice specializes in providing the highest quality care in the home and alternative settings, whether it's for one patient or a population of thousands. With a focus on the high-risk, medically complex, chronically ill, frail elderly, mobility impaired and other vulnerable patients, Evolution Health reduces the cost of care to risk-bearing entities by understanding that population health requires both planned and unplanned care.

Evolution Health's comprehensive Mobile Integrated Healthcare team enables effective, efficient and personalized assessment of patients. Evolution Health's state-of-the-art Medical Command Centers provide immediate access to licensed medical professionals capable of evaluating the patient's current condition, then matching and deploying appropriate resources to meet the patient's needs.

EVOLUTION HEALTH SERVICES

CASE STUDY:

The Right Place for Care: The Patient's Living Room

SITUATION

Patient

- 86-year-old female with hypertension and high-cholesterol causing persistent vertigo, nausea, vomiting and possible swelling near the left ear.

Condition

- Discharged from the emergency department after a severe episode of vertigo with instructions to follow up with an ear, nose and throat (ENT) specialist for possible deep sinus problems. The patient continues to experience debilitating dizziness and vomiting despite her prescription for anti-nausea medication.

Call

- As the dizziness and vomiting continue seemingly irrepressibly, the patient calls the Evolution Health (EvH) Medical Command Center (MCC) for help.

CARE PLAN

Initial Triage

- A phone evaluation with an EvH Nurse Navigator results in dispatching a Mobile Integrated Healthcare Paramedic to see the patient.

Diagnosis

- The patient's underlying conditions exacerbated a sinus infection causing vomiting and vertigo.

Actionable Treatment

- The physician recommends coordinating with the patient's primary care physician and scheduling a visit with an ENT physician. She is told to call the MCC back with any additional questions.

OUTCOMES

Results

- Patient's dizziness and vomiting subsided.
- Eased the patient's anxiety and concerns about the dizziness.
- Provided recommendations for easing the patient's current condition and improved safety and comfort.
- Collaborated with the patient and close friends in order to get additional care by the ENT.

Cost & Time Savings

- Avoided the need for additional Emergency Department utilization and medical transportation.
