

OXYGEN THERAPY *Safety*

In-home oxygen therapy is a convenient way to manage chronic conditions in the comfort of your home. However, having oxygen tanks in the home presents several risks.

Follow these tips to stay safe while doing in-home oxygen therapy.

Use and store your tank in well-ventilated areas and keep away from open flames. Although oxygen is not flammable, it does support combustion and can easily ignite and accelerate an explosion or fire.

Keep tubing out of the way as to prevent anyone from tripping on the device's cords.

Do not smoke near an oxygen tank.

Do not drape any clothing or towels on an oxygen tank.
